Met Office Mountain Weather Forecast

Brecon Beacons National Park

Forecast valid from 00:00 on Sunday 18 Dec 2022 until 23:59 on Monday 19 Dec 2022

Forecast Issued on Saturday 17 Dec 2022 at 16:25

Confidence: High confidence for a windy and wet day on Sunday with a rapid change to milder conditions during the day. Possibility of a period of freezing rain during the morning as precipitation changes from snow to rain. Mild and windy for much of Monday but turning colder again on the summits later on Tuesday. Lower confidence on timings of rainfall and cloud levels.

Headline for Sunday 18 Dec 2022: Dry at first. Rain, sleet and snow moving east, severe gales expected, hazardous conditions later.

Mountain weather hazards on Sunday 18 Dec 2022

Blizzards Low Likelihood	**Heavy persistent snow** No Likelihood	**Storm force winds** No Likelihood
Gales High Likelihood	**Severe chill effect** Medium Likelihood	**Poor visibility** Medium Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** No Likelihood

Weather and chance of precipitation at 600m

Time

Partly cloudy (night)	Partly cloudy (night)	Cloudy	Light snow	Sleet	Sleet	Heavy Rain	Light rain
Precipitation probability							
20%	20%	20%	60%	60%	60%	70%	70%

Forecast for Sunday 18 Dec 2022

Weather: Mainly dry overnight with some clear spells. Cloud thickening towards dawn and gales developing with a band of sleet or snow, soon turning to rain spreading east causing an ice hazard underfoot and the risk of freezing rain. Blizzard like conditions are possible at first on the higher tops. Sleet and rain will turn heavy at times during the afternoon and winds strengthening to severe gales for a time will make for hazardous conditions on the mountains with poor visibility likely too. Drier later but drizzle and fog likely to linger and snowmelt likely to occur during the evening will turn the ground very boggy.

Chance of cloud-free hill tops above 600m: 80% falling to 40% later, low cloud forming in association with frontal rain spreading east.

Low cloud and visibility: Initially good visibility and very little cloud below the summits but by late morning layers of cloud will start forming above 500m, becoming broken or extensive in the west, possibly more scattered around eastern areas towards Crickhowell. Visibility will turn poor or even very poor in fog patches and heavy sleet and rain. Risk of Blizzards as the area of precipitation first moves across the Brecon Beacons, perhaps on the higher hills like Pen Y Fan, with near zero visibility likely.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A severe wind chill early in the day in strong winds but note how rapidly freezing level rises during the afternoon. Gales or severe gales will cause severe buffeting and driving sleet and then rain, with the risk of freezing rain turning things very icy. A rapid thaw is likely to begin during the afternoon as temperatures rise with watercourses filling and very wet ground.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
15:00 on Sat 17 Dec 2022	2.8mm	3mm	3.2mm

Forecast for Monday 19 Dec 2022

Weather: Feeling milder than recent weeks and a wet and windy day with severe gales expected. Outbreaks of rain throughout the day and falling as rain at all levels, a rapid thaw is likely with conditions underfoot becoming very wet and water courses becoming full. Perhaps dry for a time in the afternoon and later in the evening but remaining cloudy.

Maximum wind: Southerly 40-45mph gusts 50-55mph.

Chance of cloud-free hill tops above 600m: 20% rising to 50% later, more chance as rain becomes lighter later.

Low cloud and visibility: Broken or extensive low cloud layers above 3-400m in the morning, perhaps more scattered further east in Brecon Beacons. Visibility will be poor in outbreaks of rain but becoming moderate later as rain becomes lighter. Cloud will thin and lift a little towards 5-600m in the afternoon with some gaps at times.

Temperature: **Valleys:** Plus 7 rising to 13 Celsius.
At 600m: Plus 8 Celsius
Freezing level: Above all summits
